## SUMMARY

Senior full-stack engineer with 8+ years delivering production web and desktop software for clients in the US, Canada, Europe, Australia, Japan and Malaysia, across healthcare, fintech, consumer and enterprise SaaS. Deep expertise in .NET backends and microservices built on clean and hexagonal architecture, paired with React/Next.js, Angular, Vue and Svelte front ends. Owns Azure and AWS platforms end-to-end (infrastructure as code, CI/CD, observability, OAuth2/OIDC), integrates LLMs into production features, and leads engineering standards and mentoring for teams of up to 10.

## TECHNICAL SKILLS

|                       |                                                                                                   |
|-----------------------|---------------------------------------------------------------------------------------------------|
| Languages             | C#, TypeScript, JavaScript, SQL, Java, Python                                                     |
| Backend               | .NET (up to .NET 10), ASP.NET Web API, Entity Framework, SignalR, gRPC, WebSocket                 |
| Frontend              | React, Next.js, Angular, Vue 3, Svelte, Ember.js, Vite, Tailwind CSS, Kendo UI                    |
| Desktop               | Electron, WPF, WinForms, UWP                                                                      |
| Cloud & Infra         | Azure (App Service, Functions, Service Bus), AWS, GCP, Cloudflare, Terraform, Bicep, Docker       |
| CI/CD & Observability | GitHub Actions, Azure DevOps, Application Insights, Serilog, distributed tracing, Grafana, Sentry |
| Data & Messaging      | SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, Redis, SQLite, Firebase, RabbitMQ              |
| Architecture          | Microservices, Micro-frontends, Clean/Hexagonal, DDD, Event-driven, Serverless, OAuth2/OIDC       |
| Testing & Quality     | xUnit, NUnit, Moq, Jest, Jasmine, Playwright (E2E), k6 (load), Codacy, Codecov                    |
| AI & LLM              | LLM application integration (Google Gemini API), AI-driven analytics and forecasting features     |
| AI Engineering Tools  | GitHub Copilot, Cursor, Claude, Windsurf for AI-augmented design, coding and review               |

## EXPERIENCE

Client projects, most recent first. Some engagements ran in parallel.

**AI-Driven Enterprise Procurement Platform** — Japanese engineering & construction client Jun 2025 – Present

Architect Engineer (Full-stack & DevOps) • Team of 10

- Designed the microservices and micro-frontend architecture, bootstrapped the codebase and set team coding standards.
- Owned infrastructure for the entire project: provisioned Azure with Terraform and ran four isolated environments (dev, staging, UAT, production) with configuration parity and controlled release promotion.
- Built .NET microservices and Next.js micro-frontends on a shared component library; designed AI-driven analytics endpoints behind procurement KPI dashboards and real-time order-bottleneck alerts.
- Designed REST and pub/sub integration contracts; secured all service boundaries with Auth0 OAuth2/OIDC.
- Built multi-stage CI/CD pipelines in GitHub Actions and Azure DevOps with quality gates; added metrics, distributed tracing and Serilog structured logging to meet SLA, RTO and RPO targets.
- Established automated testing from scratch: k6 load tests and Playwright end-to-end suites running on every release.

**Tech:** .NET, C#, EF Core, Next.js, TypeScript, Azure, Terraform, Docker, PostgreSQL, Redis, Auth0, Serilog, k6, Playwright

**Clinic CRM** — CRM platform for medical clinics (web and desktop) Jan 2026 – Apr 2026

Sole Full-stack Developer • end-to-end ownership of API, web, desktop and infrastructure

New CRM platform for medical clinics: patients, calls, referrals, orders, notes, tasks and reports.

- Built the platform from scratch: a Clean Architecture .NET 10 API over PostgreSQL with row-level security and audit logging.
- Delivered web (React) and desktop (Electron) clients from a single TypeScript monorepo, with offline support on desktop.
- Integrated RingCentral telephony (calls, SMS) and the Tebra practice-management system.
- Provisioned infrastructure on Azure and Cloudflare with Terraform and automated delivery through GitHub Actions.

**Tech:** .NET 10, EF Core, PostgreSQL, Azure, Cloudflare, React, Electron, TypeScript, SQLite, Auth0, RingCentral, Tebra, Terraform

**Tinybeans** — family photo-sharing app with millions of users Jan 2024 – Jun 2025

Full-stack Developer • Team of 9+

- Developed Java REST APIs for the core photo-sharing and family-timeline services used across iOS, Android and web.
- Integrated subscription billing across Stripe, Apple In-App Purchase and Google Play Billing, with TaxJar for sales tax.
- Built Ember.js web-app features and maintained the WordPress VIP marketing site (themes, plugins, content).
- Shipped continuously via GitHub Actions and AWS Elastic Beanstalk with Codacy/Codecov coverage gates; instrumented Grafana, Sentry, Leanplum and Braze.

**Tech:** Java, Ember.js, MySQL, AWS (S3, SNS, SQS, CloudFront, Elastic Beanstalk), WordPress VIP, Stripe, Braze

Proptextx — AI image-generation SaaS for real estate and interior design

Jan 2025 – May 2025

Full-stack Developer · Team of 4

- Led and mentored a team of 4 engineers: set technical direction, ran code reviews and kept delivery milestones on track.
  - Designed .NET services that provision per-client workspaces in front of the AI image-generation module.
  - Built the embeddable widget and admin dashboard in Vue 3; integrated Outseta for plan tiers, billing and usage quotas.
  - Implemented Redis-queued background workers for batch image generation and cross-service data synchronization.
- Tech: .NET Core, C#, Vue 3, PostgreSQL, Redis, GCP, Outseta

Precommitment Session Module — gaming kiosk terminal

Nov 2024 – Jan 2025

Full-stack Developer · Team of 4

- Sole .NET engineer on a hardware team; rebuilt the legacy module on modern .NET with DI and NUnit/Jest tests.
  - Mapped PCS gaming protocols and integrated live kiosk hardware over WebSocket with full backward compatibility.
  - Built a config-driven VanillaJS touchscreen UI; containerized it with Docker and shipped via GitHub Actions.
- Tech: .NET Core, C#, WebSocket, JavaScript, Docker, NUnit, Jest, Wireshark

Fund Management Portal — Australian fintech platform

Feb 2024 – Nov 2024

Full-stack Developer · Team of 6

- Delivered portfolio and transaction modules in C#/.NET from API design to Azure production, with xUnit/Moq tests.
  - Managed Azure environments with Terraform and integrated internal microservices through Kong API Gateway.
  - Built reusable Angular data-table, form and chart components that standardized UI patterns across the portal.
- Tech: .NET, C#, Entity Framework, Angular, TypeScript, SQL Server, Kong, Terraform, Azure

AI-Powered Remote Care Platform — healthcare

Jan 2023 – Jan 2024

Full-stack Developer · Team of 6

- Analyzed the legacy system and defined a phased migration to .NET and Azure serverless (Functions, Service Bus).
- Built clean-architecture REST APIs with OAuth2 security, structured logging and Application Insights monitoring.
- Created an Angular component library for care-plan, dashboard and patient-management screens.

Integrated Property Tax System — US county government

Mar 2022 – Mar 2023

Full-stack Developer · Team of 5

- Built tax-roll correction features and ASP.NET Web APIs on Azure with Serilog and Azure Monitor.
- Reviewed code, enforced coding standards and mentored junior developers on .NET best practices.

Legacy Modernization Tooling — 3 projects

Jan 2022 – Mar 2023

- Sole developer of a legacy-system visualizer (OrientDB graph, ExtJS) and a WPF Git ETL desktop tool.
- Built the ETL pipeline for a legacy title-order data-conversion MVP (.NET, Svelte, MongoDB).

PERSONAL PROJECTS

Cross-platform Desktop App — Electron, personal project

In development

- Shared React core with code-signed auto-updates (electron-updater), Supabase auth and data, and Playwright E2E tests.

Tech: Electron, React, React Router, Vite, Tailwind CSS, Radix UI, TipTap, Supabase, Bun, Playwright, nginx

LLM-Powered Analysis Tool — personal project

In development

- Gemini-based analysis backed by .NET 10 APIs and SignalR real-time hubs; deployed on Vercel, Render and Firebase.

Tech: .NET 10, SignalR, Google Gemini API, Next.js, Vercel, Render, Firebase

EARLIER EXPERIENCE

|                                                                                                                 |             |
|-----------------------------------------------------------------------------------------------------------------|-------------|
| Education Management System — set up the stack, CI/CD and coding standards for a 12-person team (.NET, Angular) | 2021        |
| Point of Sale Desktop App — sales transactions, product lookup and receipts (WPF)                               | 2021        |
| Truck & Equipment Sales System — order tracking and queue prioritization (Angular)                              | 2020        |
| Water Laboratory Management — sample tracking and inter-lab data sharing (AngularJS, .NET)                      | 2019        |
| Telecom Back-Office Portal — Malaysian operator (ASP.NET WebForms)                                              | 2019        |
| Decentralized Asset Exchange — Scrum Master and React front end (Solidity, Ethereum)                            | 2018 – 2019 |
