

Phuong Tran

SOFTWARE ENGINEER

OVERVIEW

Experienced Full-stack Software Engineer with 7 years in designing, developing, and deploying web and desktop applications across healthcare, finance, education, and fund management sectors. Specialized in backend systems with .NET, scalable frontend development using Angular and other single-page application libraries, as well as cloud-native solutions on Azure and AWS. Adept at system architecture, integration, CI/CD, and Agile methodologies. Strong advocate for code quality, maintainability, and team mentorship.

EDUCATION

- **Duy Tan University**
Bachelor of Software Engineering

SKILLS

- **Programming languages:** C#, JavaScript/TypeScript, Java.
- **Library/Framework:** .NET Core, .NET Framework, ASP .NET API, Entity Framework, WPF, WinForms, UWP, Flutter, Android, Angular, Svelte, VueJS, VanillaJs, SignalR, Web Socket.
- **UI library:** HTML, CSS, Material Design UI, Bootstrap, Kendo UI.
- **Testing:** NUnit, XUnit, Jasmine, Jest, Junit, Mockito.
- **Database:** SQL Server, MySQL, Firebase, MongoDB, OrientDB, CosmosDB, Redis.
- **Cloud:** Azure, Firebase/GCP, AWS
- **Message Queue:** RabbitMQ, MSMQ, SQS, Redis Queue, Azure Bus Service.
- **DevOps:** Git, Github Action, Azure DevOps, Terraform, Docker, Beanstalk.
- **Infrastructure:** Containerization, Microservice, serverless architecture
- **English:** Upper Immediate
- **Project Management:** Jira, Kanban, Trello, Granth chart, WBD, Planning.

WORKING HISTORY

- Propel Ventures (2024 - 2025)
- FPT Software (2022 - 2024)
- Axon Active (2021 - 2022)
- Enclave (2019 - 2021)

SUMMARY

- Around 7 years of experience
- Good understanding of software development
- Ability to self-learn & adapt to new technologies quickly
- Ability to work independently & teamwork
- Ability to review code & mentoring members.

PROJECT HISTORY

Project Name	Tinybeans - The Photo-Sharing App That Families Love
Duration	1/2024 – 6/2025
Description	Tinybeans is a private family photo-sharing app that turns everyday moments into memories. Think of us as a journal, visual diary, and time capsule that allows parents to capture and share their favourite snapshots and videos with the people who matter most.
Position	Fullstack Developer
Responsibility	- o API Development with Java - o Build themes, plugins, and manage content with WordPress - o Review code with Codacy, Codecov, Github - o Build and deploy new system version with Github, AWS beanstalk. - o Develop web app with Ember - o Manage content, theme, page configuration with WordPress, WP VIP - o Integrate payment with Stripe, Apple In-app purchase, Google Play Billing, TaxJar. - o Analytics and monitoring with Granfara, Sentry, Leanplum, Braze
Team size	9+
Technology	Java, Wordpress, MySQL, AWS (S3, SNS, SQS, CloudFront,...), Braze, Ember

Project Name	Proptextx – AI image generation widget for commercial real estate and interior products
Duration	1/2025 – 5/2025
Description	The PIM is an interactive module of gaming kiosk terminal that allows users to activate and manage their gaming sessions. It includes a touchscreen interface, user authentication, and connectivity to the gaming system. All screens in PCS mode displayed on PIM are managed by PCS portal.
Position	o Full-stack .NET engineer.
Responsibility	- o Investigating how the system works and integrating with another modules. - o Build API Services to create and manage workspaces for widget usage by different types of clients—intermediate to handle requests to generate images from clients and responses from the AI generation module. - o Build browser widget, admin dashboard with VueJS - o Integrate with Outseta for Subscription management - o Build workers to synchronize data and process batch jobs. - o Mentoring & leading a small team to develop the product
Team size	4
Technology	.NET Core, Vue 3, Outseta, Postgres, Redis, ScaleWay

Project Name	Programming Interface Module (PIM) – Precommitment Session Activation
Duration	11/2024 – 1/2025
Description	The PIM is an interactive module of gaming kiosk terminal that allows users to activate and manage their gaming sessions. It includes a touchscreen interface, user authentication, and connectivity to the gaming system. All screens in PCS mode displayed on PIM are managed by PCS portal.
Position	.NET Developer
Responsibility	- o Play as a full-stack .NET engineer. - o Re-developing PIM with the latest version of .NET and related technologies. - o Investigating how the system works and integrating with another modules. - o Build the front end with VanillaJS - o Deployment with Docker and GitHub Action

Team size	4
Technology	.NET Core, VanillaJS, Web socket, JavaScript, C#, Wireshark, Postman, SOAP UI, Git, Docker, Jest, NUnit, Docker

Project Name	Fund Management System
Duration	2/2024 - 11/2024
Description	Developing a fund manager portal as an extension of the financial management system, the flagship product of a fintech company based in Australia.
Position	.NET Developer
Responsibility	- Implementing features, reviewing pull requests, testing, deploying. - Engineered backend modules for investment portfolio and transaction management, built robust APIs in C#/.NET - Adjust the Azure infrastructure with Terraform - Integrate with other services in a microservice system - Build the front end using Angular and develop base components to accelerate the development process.
Team size	6
Technology	Git, .NET, C#, Angular, TypeScript, Entity Framework, Kong Gateway, SQL Server, Moq, xUnit, Terraform, Azure

Project Name	Health care system
Duration	1/2023 – 1/2024
Description	Developing an AI-based health care system that enhances the customer service of the hospitals and health organizations. The system enables users to design, access, and implements the care plans for specific populations according to their partner needs. By using voice recognition technology, and contextual understanding, the system can understands the conversations, answers the calls, or initiate the calls to patients to check their health status, as well as recording their feedbacks. This system offers effective solutions to take care the patients remotely, reducing the operating costs.
Position	Fullstack Developer
Responsibility	- Implementing features based on the requirement - Analysis of the legacy system and documenting the base knowledge for development process - Build the front end using Angular and develop base components to accelerate the development process. - Implement API and apply Azure Cloud services to build system infrastructure
Team size	6
Technology	Git, .NET, C#, Angular, TypeScript, Entity Framework, Azure, Serverless

Project Name	Data Conversion
Duration	1/2023 – 3/2023
Description	The project envisions an application that allows data to be migrated from any source to any target destination. It is expected to be fully functional at the end if 2023. For the MVP, in particular, the aim is provide the capability to transfer title order data from orders in the legacy systems into the new systems
Position	.NET Developer
Responsibility	Implementing features, reviewing pull requests, testing, deploying.
Team size	5
Technology	Git, .NET, C#, Svelte, TypeScript, Entity Framework, MongoDB

Project Name	Integrated Property Tax System
--------------	---------------------------------------

Duration	3/2022 – 3/2023
Description	As a .NET developer, I contributed in the process roll corection module of the Integrated Property Tax system, which is the new system developed for a county in the USA to handle priperty tax collection for secured and unsecured properties. The module allows the county to adjust the tax roll based on various factors and integrates seamlessly with other modules within the system. Additionally, the module produces reports and notifications for different stakeholders.
Position	.NET Developer
Responsibility	- Implementing features based on the requirement - Implement API and apply Azure Cloud services to build system infrastructure - Review and mentoring members
Team size	5
Technology	Git, .NET, C#, Svelte, TypeScript, Entity Framework, MongoDB

Project Name	GIT POC – Source Codes ETL Application
Duration	9/2022 -12/2022
Description	A desktop application developed to perform ETL process with source codes pulled from vâious git repos. The application allows user to create diffirent data sources with separate cinfigurations. After having credentials for each data source, the application will perform ETL processing, and export the expected results.
Position	.NET Developer
Responsibility	- Implementing features, reviewing pull requests, fixing bugs.
Team size	1
Technology	Git, .NET, C#, WPF

Project Name	Modeling and visualizing the legacy system
Duration	1/2022 – 9/2022
Description	Building a web application that aims to save time and resource for businesses who are migrating their legacy system into the modern system. The system will use various technologies and techniques to performs ETL for legacy systems. After that, the system will doleize the entities of the legacy systems, and visualize them on graphs, friendly user interface, provides the detail of each components, to help developers and system analysts have an overview about how the system works, as well as find valuable details for developing new systems. As a result, this will help them save time and resource for businesses.
Position	.NET Developer
Responsibility	Implementing features, reviewing pull requests, fixing bugs.
Team size	1
Technology	Git, .NET, C#, ExtJs Sencha, OrientDb, JavaScript

Project Name	Point of Sale Desktop Application
Duration	6/2021 – 12/2021
Description	Building a desktop application for point of sale system.
Position	.NET Developer
Responsibility	Implementing features, reviewing pull requests, fixing bugs.
Team size	4
Technology	Git, .NET, C#, WPF
Project Name	Professional Education Management System
Duration	1/2021 – 8/2021
Description	Building a system for education management, which provides the solution to manage the school's operations. It is a digital, automated, and data-driven dolution to

	manage the complete student activities. The system provides multi-platform for users including web and mobile.
Position	.NET Developer
Responsibility	- Initialize infrastructure for backend and front end - Analyze business requirements - Implement features - Fix bugs
Team size	12
Technology	Git, .NET, C#, Angular, TypeScript, SQL Server

Project Name	Truck and Housing Equipment Sale System
Duration	2/2020 - 12/2020
Description	A web application to manage operation queue for selling truck and housing equipments.
Position	.NET Developer
Responsibility	Implementing features, reviewing pull requests, fixing bugs.
Team size	5
Technology	Git, .NET, C#, Angular, TypeScript, SQL Server

Project Name	Water Laboratory Management System
Duration	7/2019 – 1/2020
Description	A web application for managing a water testing lab, provides user ability to manage the water quality analyses, and sharing the data to another labs.
Position	.NET Developer
Responsibility	Implementing features, reviewing pull requests, fixing bugs.
Team size	4
Technology	Git, .NET, C#, AngularJS, TypeScript, SQL Server, VB.NET

Project Name	Back-Office Dashboard
Duration	3/2019 – 6/2019
Description	Maintaining a back-office portal system for a communication provider from Malaysia
Position	.NET Developer
Responsibility	Implementing features, fixing bugs.
Team size	2
Technology	Git, .NET, C#, WebForms

Project Name	Decentralized Asset Exchange Platform
Duration	8/2018 – 6/2019
Description	Developing a decentralized digital asset exchange system with the Ethereum platform.
Position	Scrum master, front end
Responsibility	Plan, manage projects, research products, develop interfaces for the system
Team size	4
Technology	Solidity, JavaScript, ReactJs, Ethereum
