SUMMARY

Senior full-stack engineer with 8+ years of experience building production web and desktop applications for clients in the US, Australia, Japan and Malaysia, across healthcare, fintech, consumer apps and enterprise SaaS. Specializes in .NET backends built on clean and hexagonal architecture, Angular and Vue front ends, and Azure and AWS infrastructure managed as code. Owns platforms end-to-end, from Terraform and CI/CD to observability and OAuth2/OIDC security. Sets architecture and coding standards for teams of up to 10 and mentors engineers.

TECHNICAL SKILLS

Languages	C#, TypeScript, JavaScript, SQL, Java, Python (scripting)
Backend	.NET / .NET Core, ASP.NET Web API, Entity Framework, SignalR, gRPC, WebSocket, REST
Frontend	Angular, Vue 3, React, Next.js, Svelte, Ember.js, HTML/CSS, Material Design, Kendo UI
Cloud & DevOps	Azure (App Service, Functions, Service Bus, Application Insights), AWS (S3, SQS, SNS, CloudFront, Elastic Beanstalk), GCP, Docker, Terraform, Bicep, GitHub Actions, Azure DevOps
Data & Messaging	SQL Server, PostgreSQL, MySQL, MongoDB, Cosmos DB, Redis, Firebase, RabbitMQ
Architecture	Clean / Hexagonal Architecture, DDD, Microservices, Serverless, Event-driven, OAuth2 / OIDC
Testing & Quality	xUnit, NUnit, Moq, Jest, Jasmine, Playwright, k6, Codacy, Codecov, Serilog, distributed tracing
Desktop	WPF, WinForms, UWP, Electron
AI-assisted dev	GitHub Copilot, Cursor, Claude, Windsurf

EXPERIENCE

Client projects, most recent first. Some engagements ran in parallel.

AI-Driven Enterprise Procurement Platform — Japanese engineering & construction client Jun 2025 – Present

Architect Engineer (Full-stack & DevOps) · Team of 10

- Owned the platform end-to-end: designed the system architecture, bootstrapped the codebase, and set the layered design, dependency-injection conventions and coding standards adopted by the 10-person team.
- Provisioned Azure infrastructure with Terraform and ran four isolated environments (dev, staging, UAT, production) with configuration parity and controlled release promotion.
- Built .NET REST APIs and an Angular shared component library; designed AI-driven analytics endpoints behind procurement KPI dashboards and real-time order-bottleneck alerts.
- Defined integration contracts using bidirectional REST and event-based pub/sub messaging; secured every service boundary with OAuth2/OIDC via Auth0.
- Built multi-stage CI/CD pipelines in GitHub Actions and Azure DevOps with quality gates; added metrics, distributed tracing and Serilog structured logging to meet SLA, RTO and RPO targets.
- Established automated testing from scratch: k6 load tests and Playwright end-to-end suites running on every release.

Tech: .NET, C#, Entity Framework, Angular, Next.js, TypeScript, Azure, Terraform, Docker, PostgreSQL, Redis, Auth0, Serilog, k6, Playwright

Tinybeans — family photo-sharing app with millions of users Jan 2024 – Jun 2025

Full-stack Developer · Team of 9+

- Developed Java REST APIs for the core photo-sharing and family-timeline services used across iOS, Android and web.
- Integrated subscription billing on every platform: Stripe (web), Apple In-App Purchase and Google Play Billing, with TaxJar for sales tax.
- Built Ember.js web-app features and maintained the WordPress VIP marketing site (themes, plugins, content).
- Shipped releases continuously through GitHub Actions and AWS Elastic Beanstalk; enforced coverage standards with Codacy and Codecov.
- Instrumented Grafana, Sentry, Leanplum and Braze to monitor system health and drive user-engagement campaigns.

Tech: Java, Ember.js, MySQL, AWS (S3, SNS, SQS, CloudFront, Elastic Beanstalk), WordPress VIP, Stripe, Braze

Proptextx — AI image-generation SaaS for real estate and interior design <i>Full-stack Developer · Team of 4</i> - Led and mentored a team of 4 engineers: set technical direction, ran code reviews and kept delivery milestones on track. - Designed .NET services that provision per-client workspaces and broker requests between embedded widgets and the AI image-generation module. - Built the embeddable widget and admin dashboard in Vue 3; integrated Outseta for plan tiers, billing and usage quotas. - Implemented Redis-queued background workers for batch image generation and cross-service data synchronization. Tech: .NET Core, C#, Vue 3, PostgreSQL, Redis, GCP, Outseta	Jan 2025 – May 2025
Precommitment Session Module — gaming kiosk terminal <i>Full-stack Developer · Team of 4</i> - Sole .NET engineer on an embedded-hardware team; rebuilt the legacy module on modern .NET with layered architecture, dependency injection and unit tests (NUnit, Jest). - Mapped the PCS gaming-system protocols and integrated with live kiosk hardware over WebSocket, keeping every PCS-driven screen flow backward compatible. - Built a config-driven VanillaJS touchscreen UI; containerized it with Docker and shipped via GitHub Actions. Tech: .NET Core, C#, WebSocket, JavaScript, Docker, NUnit, Jest, Wireshark	Nov 2024 – Jan 2025
Fund Management Portal — Australian fintech platform <i>Full-stack Developer · Team of 6</i> - Delivered portfolio and transaction-management modules in C#/.NET end-to-end, from API design and code review to Azure production releases, with xUnit and Moq unit tests. - Managed Azure environments with Terraform and integrated internal microservices through Kong API Gateway. - Built reusable Angular data-table, form and chart components that standardized UI patterns across the portal. Tech: .NET, C#, Entity Framework, Angular, TypeScript, SQL Server, Kong, Terraform, Azure	Feb 2024 – Nov 2024
AI-Powered Remote Care Platform — healthcare <i>Full-stack Developer · Team of 6</i> - Analyzed the legacy system and defined a phased migration to .NET and Azure serverless (Functions, Service Bus). - Built clean-architecture REST APIs with OAuth2 security, structured logging and Application Insights monitoring. - Created an Angular component library for care-plan, dashboard and patient-management screens. Tech: .NET, C#, Entity Framework, Angular, TypeScript, Azure Functions, Service Bus	Jan 2023 – Jan 2024
Integrated Property Tax System — US county government <i>Full-stack Developer · Team of 5</i> - Built tax-roll correction features and ASP.NET Web APIs on Azure with Serilog and Azure Monitor. - Reviewed code, enforced coding standards and mentored junior developers on .NET best practices.	Mar 2022 – Mar 2023
Legacy Modernization Tooling — 3 projects <i>Full-stack Developer · Solo and small-team projects</i> Legacy system visualizer: sole developer; ETL of code entities into an OrientDB graph with an interactive ExtJS UI. Git ETL desktop app: sole developer; WPF tool that extracts and exports data from multiple Git sources. Data conversion MVP: ETL pipeline migrating legacy title-order data to a new platform (.NET, Svelte, MongoDB).	Jan 2022 – Mar 2023
EARLIER EXPERIENCE	
Education Management System — set up the stack and CI/CD for a 12-person team; 1,200+ students (.NET, Angular)	2021
Point of Sale Desktop App — sales transactions, product lookup and receipts (WPF)	2021
Truck & Equipment Sales System — order tracking and queue prioritization (Angular)	2020
Water Laboratory Management — sample tracking and inter-lab data sharing (AngularJS, .NET)	2019
Telecom Back-Office Portal — Malaysian operator (ASP.NET WebForms)	2019
Decentralized Asset Exchange — Scrum Master and React front end (Solidity, Ethereum)	2018 – 2019
EDUCATION & LANGUAGES	
Bachelor of Software Engineering — Duy Tan University, Da Nang, Vietnam	
Languages: English (Upper-intermediate, B2), Vietnamese (Native)
